

Geongyu Lee 이건규 · イ · ゴンギュ

AI Researcher · Computational Pathology × Multi-Omics

jrbr365@gmail.com · github.com/Geongyu · Google Scholar · linkedin.com/in/geongyu-lee · Seoul, Republic of Korea

Five years building deep learning for computational pathology and drug discovery. First-author work on H&E-based breast-cancer recurrence (Scientific Reports 2025), a contribution to large-scale pathology foundation models (G2L, AAAI 2026 oral), and KFDA-track model validation; now extending histopathology AI into proteomics and multi-omics.

SELECTED PUBLICATIONS

Google Scholar · 55 citations · h-index 5 · i10-index 2

- 1 Recurrence risk prediction in early-stage breast cancer from H&E whole-slide images.** Scientific Reports, 2025. First author · doi.org/10.1038/s41598-025-16679-x
- 2 G2L: From Giga-scale to Cancer-specific Pathology Foundation Models via Knowledge Distillation.** AAAI 2026 Workshop (W3PHIAI), Oral. arXiv:2510.11176
- 3 KPIs 2024 Challenge: Advancing glomerular segmentation from patch- to slide-level.** Medical Image Analysis 114, 104234, 2026. 2nd place, whole-slide track · doi.org/10.1016/j.media.2026.104234
- 4 AI-driven digital pathology in urological cancers (Review).** Prostate International, 2025. Co-first author
- 5 MurSS: Multi-Resolution Selective Segmentation for breast cancer.** Bioengineering, 2024. MDPI
- 6 Spatial proteomics guided by H&E-based AI reveals recurrence-risk niches in triple-negative breast cancer.** Preprint, 2026. arXiv:2608.03145
- 7 Multi-section WSI analysis for biochemical recurrence in prostate cancer.** Preprint, 2026. arXiv:2603.20273
- 8 Supervised contrastive embedding for medical image segmentation.** IEEE Access, 2021.

EXPERIENCE

OMIXAI (fmr. RadiSen)

Feb 2025 – Present

AI Researcher · Seoul

- Lead multi-omics foundation-model R&D integrating proteomics with H&E pathology for drug-response prediction; co-authored the G2L pathology foundation model.
- Co-authored spatial-proteomics work using H&E-based AI risk scores to pinpoint recurrence-risk niches in triple-negative breast cancer (preprint, 2026).
- Built a proteomics drug-response model (Leave-Drug-Out Pearson ≥ 0.65) and a canine veterinary-oncology drug-recommendation algorithm (top-k $\geq 70\%$).
- Advanced ADMET prediction and self-supervised proteomic representation learning with LoRA / PEFT.
- Co-led the Virtual Cell Challenge: predicting CRISPR-knockdown response in pluripotent stem cells.

Deep Bio

Mar 2021 – Jan 2025

AI Researcher · Seoul

- First-authored the multi-center breast-cancer recurrence study (Scientific Reports 2025); built a scalable WSI pipeline handling 500+ slides.
- Developed lymph-node metastasis detection and the KPIs 2024 glomeruli segmentation model (2nd place, whole-slide track, MICCAI); challenge results published in Medical Image Analysis (2026).
- Led prostate metastasis & recurrence-risk projects; presented at AACR (2022, 2023) and USCAP (2022).
- Contributed to KFDA regulatory documentation and validation, plus internal server-automation tooling (Docker).

Nuricon

2021

Intern · Pangyo

- Built a parking-lot fire-detection AI system.

SELECTED PROJECTS

Proteomics drug-response prediction · OMIXAI

Self-supervised proteomic representation with LoRA/PEFT and cell-line IC50 prediction; leave-drug-out validation (Pearson ≥ 0.65).

Veterinary oncology CDSS & Virtual Cell · OMIXAI

Canine drug-recommendation (top-k $\geq 70\%$) and CRISPR-knockdown response prediction in pluripotent stem cells.

Oncotype DX recurrence prediction · Deep Bio

Breast-cancer prognosis from H&E WSIs only; confidence-aware selection + majority voting into GHI-RS risk groups (high-risk acc 91.2%).

Brain-hemorrhage detection on CT · SK / Ajou Univ. Hospital

2D & 3D hemorrhage segmentation, slice-level classification, domain-generalization validation with class-activation-map auditing.

EDUCATION

M.S. Data Science · Seoul Nat'l University of Science and Technology (SeoulTech)

2019 – 2021

Advisor: Prof. Sangheum Hwang · Thesis: contrastive loss for segmentation under uncertain medical-image labels.

SKILLS

Deep Learning	PyTorch, HuggingFace, PEFT / LoRA, Accelerate, DDP / FSDP
Pathology	OpenSlide, QuPath, CLAM / weakly-supervised MIL, UNI · CONCH · Virchow, WSI tiling
Bio / Omics	scanpy · AnnData, single-cell perturbation, proteomic representation, ADMET
MLOps & Languages	Python, R, SQL, Bash, Docker, Slurm, W&B, MLflow, FastAPI, Git

AWARDS & FUNDING

KPIs Challenge 2024 · Whole-Slide Track

2nd place · Glomeruli segmentation, held at MICCAI 2024 · results published in Medical Image Analysis 2026

Pan-Sarcoma Proteogenomic Profiling for Precision Oncology

Korea–US–Japan · Kyung Hee Univ. Medical Center · 2025–2028 · KRW 400M · Participating Researcher

Virtual-Cell CDSS for Veterinary Oncology

IPET / Ministry of Agriculture · 2026–2030 (awarded) · KRW 3B+ · Participating Researcher

General-Purpose AI for Cancer Pathology Diagnosis

Lead: Deep Bio · National R&D · 2021–2025 · KRW 2.375B · Participating Researcher

TALKS & ABSTRACTS

GIW ISCB-Asia 2026 · Predictability is not substitutability: a cost-of-substitution framework for H&E-based molecular prediction across 5 cancers (poster, first author) · **GIW ISCB-Asia 2026** · A reliability map for per-gene multiome RNA velocity parameters in single-cell kinetics (oral, co-author) · **AACR 2023** · Predicting protein receptor status from H&E-stained images in breast cancer (poster, first author) · **AACR 2022** · Recurrence risk prediction based on automatic histologic analysis of breast cancer using WSIs (poster, first author) · **AACR 2022** · Deep learning based pancreatic adenocarcinoma survival prediction applicable to other organs (poster, co-author) · **USCAP 2022** · Automatic histological grading of breast cancer resection tissue (poster, first author) · **USCAP 2022** · Breast cancer survival analysis through features from a prostate diagnosis model (poster, co-author) · **KIIE Fall Conference 2020** · Utilizing a contrastive loss to improve segmentation model performance (oral, first author).
