Geongyu Lee 이건규 · イ・ゴンギュ

Machine Learning Researcher · Computational Pathology × Multi-Omics

rjsrb365@gmail.com · geongyu.github.io · github.com/Geongyu · Google Scholar · Seoul, Republic of Korea

I develop machine learning models that predict molecular measurements from pathology slides and, in my current industry work, drug response from proteomics. I focus on whether these predictions remain valid at new hospitals and for drugs not seen in training. I have 5+ years of industry R&D experience, and at Deep Bio I contributed to pre-deployment model validation for a medical-AI product submitted to Korea's Ministry of Food and Drug Safety (MFDS).

EXPERIENCE

OMIXAI (formerly RadiSen)

Feb 2025 – Present

AI Researcher · Seoul

- Lead R&D on a multi-omics model that combines proteomics and RNA with H&E pathology to predict drug response (in progress).
- Built a proteomics-based model of cell-line drug response (IC50) and evaluated it with leave-drug-out splits, so test drugs were never seen in training (Pearson ≥ 0.65; internal R&D, unpublished). Also worked on self-supervised representation learning for proteomics with LoRA/PEFT.
- Developed ADMET prediction models and a drug-recommendation algorithm for canine cancer (top-k ≥ 70% on an in-house cohort; internal R&D, unpublished).
- Co-led OMIXAI's team entry in the Arc Institute Virtual Cell Challenge (predicting CRISPR-knockdown response in pluripotent stem cells).
- Co-first author of the MoSPR preprint on gene-expression prediction from H&E (code released). The method ranked 1st of 15 in the paper's benchmark on three TCGA cancers (gene-wise PCC).

Deep Bio

Mar 2021 – Jan 2025

AI Researcher · Seoul

- First-authored a two-hospital study (n=125) predicting Oncotype DX recurrence-score risk groups from H&E slides alone (Scientific Reports 2025; sensitivity 0.86 / 0.75 / 0.53 for low / intermediate / high risk). Built a WSI pipeline that processed 500+ slides.
- Developed a lymph-node metastasis detection model and, with the Deep Bio team, the glomerular segmentation model for the KPIs 2024 Challenge at MICCAI 2024 (2nd place, whole-slide track). Co-authored the challenge report (Medical Image Analysis, 2026).
- Led prostate metastasis and recurrence-risk modeling projects.
- Presented first-author breast-cancer pathology posters at AACR (2022, 2023) and USCAP (2022).
- Contributed to pre-deployment model validation and regulatory documentation for a medical-AI product submitted to Korea's MFDS. Built internal server-automation tools with Docker.

Nuricon 2021

Intern · Pangyo

– Built a parking-lot fire-detection AI system.

SELECTED PROJECTS

Brain-hemorrhage detection on CT · SK / Ajou Univ. Hospital

2D and 3D hemorrhage segmentation and slice-level classification. Validated domain generalization on external data and checked classification reliability with class-activation maps.

FlyGate: agent for drug discovery and pharmacovigilance · NVIDIA Korea Agentic AI Hackathon 2026

Side project with a team of 5. Built the FlyDiscovery module and its UI on BioNeMo NIM (off-the-shelf model checks: OpenFold3 RMSD 1.0 Å, Boltz-2 affinity ρ 0.767).

EDUCATION

M.S. Data Science · Seoul National University of Science and Technology (SeoulTech) 2019 – 2021

Advisor: Prof. Sangheum Hwang · Thesis: contrastive loss for segmentation under uncertain medical-image labels.

B.S. Information Security · Daejeon University 2012 – 2019

SKILLS

Deep Learning	PyTorch, HuggingFace, PEFT / LoRA, Accelerate, DDP / FSDP
Pathology	OpenSlide, QuPath, CLAM / weakly-supervised MIL, UNI · CONCH · Virchow, WSI tiling
Bio / Omics	scanpy · AnnData, single-cell perturbation, proteomic representation learning, ADMET
MLOps & Languages	Python, R, SQL, Bash, Docker, Slurm, W&B, MLflow, FastAPI, Git

AWARDS & FUNDED RESEARCH

KPIs 2024 Challenge · Whole-Slide Track

2nd place · glomerular segmentation, held in conjunction with MICCAI 2024 · results published in Medical Image Analysis 2026

Pan-Sarcoma Proteogenomic Profiling for Precision Oncology

Korea–Japan · Kyung Hee Univ. Medical Center · 2025–2028 · Participating Researcher

Virtual-Cell CDSS for Veterinary Oncology

IPET / Ministry of Agriculture · 2026–2030 (awarded) · Participating Researcher

General-Purpose AI for Cancer Pathology Diagnosis

Lead: Deep Bio · National R&D · program 2021–2025 · Participating Researcher, Apr 2021 – Jan 2025

CONFERENCE PRESENTATIONS

Predictability is not substitutability: a cost-of-substitution framework for H&E-based molecular prediction across 5 cancers · BIOINFO/GIW ISCB-Asia 2026 · Accepted poster · First author

A reliability map for per-gene multiome RNA velocity parameters in single-cell kinetics · BIOINFO/GIW ISCB-Asia 2026 · Accepted oral · Co-author

Predicting Protein Receptor Status from H&E-stained Images in Breast Cancer · AACR Annual Meeting 2023 · Poster · First author

Recurrence Risk Prediction Based on Automatic Histologic Analysis of Breast Cancer Using Whole Slide Images · AACR Annual Meeting 2022 · Poster · First author

A Deep Learning based Pancreatic Adenocarcinoma Survival Prediction Model Applicable to Adenocarcinoma of Other Organs · AACR Annual Meeting 2022 · Poster · Co-author

Automatic Histological Grading of Breast Cancer Resection Tissue · USCAP Annual Meeting 2022 · Poster · First author

Breast Cancer Survival Analysis through the Extracted Feature from the Prostate Diagnosis Model · USCAP Annual Meeting 2022 · Poster · Co-author

영역분할 모델 성능 향상을 위한 대조적 손실 함수의 활용 (Utilizing a contrastive loss to improve segmentation model performance) · KIIE Fall Conference 2020 · Oral · First author

COMMUNITY & SERVICE

Research member (Runner), AutoBioX: AI Agents for End-to-End Bio Research, Pseudo Lab Season 12 · 2026 · completed · two studies accepted at BIOINFO/GIW ISCB-Asia 2026, then submitted to ML4H 2026 Findings (under review)
